

This order takes away regulatory power from states and local governments over small cell towers and other wireless infrastructure and in effect, mandates wireless infrastructure everywhere without the acknowledgement that science has shown that wireless is not safe.

This draft order ignores ADA and people disabled by wireless exposure. I have microwave radiation illness and have adverse health effects when exposed to wireless. The number of people negatively affected by wireless will continue to increase and with the proposed wireless infrastructure everywhere, there will be no place to escape from the negative exposures forced on everyone without consent. I am requesting that this FCC order be postponed for any residential deployment access until the science proves that it is safe for humans 24 hours a day, 7 days a week continually without a break in time and everywhere without a break in space, and therefore no opportunity for respite.
